

PROJECT DEVELOPMENT PHASE

Metro Ticket Generating System in ServiceNow

Project Development Phase

The supplied Development Phase folder contains several model-oriented performance templates. Because this project is a ServiceNow workflow application rather than an AI/ML/BI/Salesforce/Tableau application, the relevant templates are adapted to ServiceNow functional/performance testing and the non-applicable model-specific templates are explicitly marked.

1. ServiceNow Functional & Performance Testing

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Catalog item access	Open Service Portal → Book A Metro Ticket.	Catalog form opens successfully.	Verified during demo.	PASS
FT-02	Station selection	Select Starting From and Going To.	Station reference values can be selected.	Verified during demo.	PASS
FT-03	Same station validation	Select the same station for both fields.	Error prevents invalid route.	Implemented in Client Script.	PASS
FT-04	Single journey fare	Select valid route, Single journey and passenger count.	Single journey amount is calculated.	Verified in testing.	PASS
FT-05	Return journey fare	Select valid route, Return journey and passenger count.	Return amount is calculated correctly.	Verified in testing.	PASS
FT-06	Others payment UI	Select Mode of Payment = Others.	Enter Payment Mode becomes visible.	Verified successfully.	PASS
FT-07	QR ticket	Submit booking through QR flow.	QR widget displays a QR representation.	Implemented and demonstrated.	PASS
FT-08	Metro Database creation	Complete catalog request and check Metro Database.	A ticket record is created automatically.	Verified in demo.	PASS
FT-09	RITM mapping	Check RITM Number after record creation.	Readable RITM number such as RITM0010006 is stored.	Verified after mapping correction.	PASS
PT-01	Form	Change	Fare fields	Client-side	PASS

	responsiveness	station/journey/passenger selections.	update without unnecessary server delay.	logic used.	
PT-02	Flow execution	Submit a valid request.	Automation creates the Metro Database record.	Verified in testing.	PASS

2. User Acceptance Testing (UAT)

Project Overview

Field	Value
Project Name	Metro Ticket Generating System in ServiceNow
Project Description	ServiceNow application for digital metro ticket booking, automated fare calculation, QR ticket generation and ticket record management.
Project Version	V1.0
Testing Period	Final project testing period
Testing Environment	ServiceNow development instance / Service Portal

Testing Scope

- Catalog item booking
- Station selection and validation
- Single and return journey fare calculation
- Passenger count selection
- Payment mode handling
- QR ticket generation
- Metro Database record creation
- RITM Number mapping
- Access control for custom station data

UAT Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Book single journey	Select Ameerpet → Kukatpally, Single, 2 passengers; submit.	Correct single fare and ticket record are created.	Worked in project testing.	PASS
TC-002	Book return journey	Select Ameerpet → LB Nagar, Return, 2 passengers.	Return fare is populated and record is created.	Worked in project testing.	PASS
TC-003	Payment	Select Others	Enter Payment	Worked in	PASS

	Others	and enter Cash.	Mode is visible and stored.	project testing.	
TC-004	QR display	Trigger QR generation from booking flow.	QR widget is displayed.	Demonstrated in project flow.	PASS
TC-005	RITM tracking	Open Metro Database after request.	Readable RITM Number is available.	Corrected and verified.	PASS
TC-006	Invalid same station	Select same source and destination.	Validation message is displayed.	Implemented in Client Script.	PASS

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	RITM field initially showed sys_id instead of readable number.	Inspect Request Item value in Metro Database.	Medium	Closed	Kept Request Item reference and added RITM Number string mapping.
BG-002	QR Generated could remain false when QR flow was not triggered.	Submit a test without completing QR generation.	Low	Known / Test Condition	Ensure QR generation is completed during the final demo path.

3. Supplied Model Performance Templates — Applicability

Supplied Template	Applicability to this ServiceNow Project	Documentation Treatment
Artificial Intelligence	Not an AI model project.	N/A — no AI training/validation accuracy is required.
Machine Learning	Not an ML model project.	N/A — no classification/regression metrics apply.
GenAI Functional & Performance Testing	Not a GenAI application.	N/A — adapted functional testing is provided above.
Power BI	No Power BI dashboard is part of the implemented project.	N/A.
Tableau	No Tableau dashboard is part of the implemented project.	N/A.
Salesforce	The project is implemented in ServiceNow, not Salesforce.	N/A.
User Acceptance Testing FSD	Applicable to the ServiceNow application.	Fully adapted and completed above.

Development Outcome

The developed system implements the required ServiceNow configuration: station master data, Book A Metro Ticket catalog item, fare client script, payment UI policy, QR widget, Metro Database, Flow Designer automation, ACLs, auto-numbered ticket records and readable RITM tracking.
